

ALL CROPS. ALL STAGES. One solution.

Primacy ALPHA® works inside the plant to stimulate the efficient assimilation and utilization of nutrients. Primacy ALPHA also functions as a reproductive growth catalyst that collectively stimulates, intensifies and optimizes plant metabolism; encourages rapid plant nutrient uptake; promotes plant growth and enhances consistent crop quality and yield potential.

Versatile in both soil and foliar applications and compatible with commonly used fertilizers and pesticides, Primacy ALPHA is a critical part of your fertility program, with proven performance on a wide range of crops including cereals, pulses, alfalfa, tree nuts, grapes, citrus, strawberries, brassica crops (broccoli, cauliflower) and fruiting vegetables (tomatoes, peppers).

“You could visually see that the treated area was going to yield more, larger pods, and a heavier, denser canopy. Primacy ALPHA treated canola ended up yield 5 bushel more than the untreated.”

– Braden Drul, Drul Farms Ent., Oakburn, MB
